

HWK4, 卡如宇 2023/02/26

6.4-1: 首先建堆:

HEAPSORT:

6.5-9. 这里的堆中元素为链表指针, 根据链表指针指向的 value 排序

Extern-Sort (Linkhead[k])

$A[k]$ .

Buildlinklist(head)

current = head.

for  $i=1$  to  $k$ .

$A[i] = \text{Linkhead}[i]$

BUILD-MIN-HEAP( $A$ ).

While  $A.\text{heapsize} \neq 0$ :

pointer = HEAP-EXTRACT-MIN( $A$ )

```

current → value = pointer → value.
current = current → next
pointer = pointer → next
if pointer ≠ null ptr
    HEAP-INSERT(A, pointer)
return head

```

7.2-5: 设最小深度为  $d_1$ ,

$$\text{则 } n \cdot (\alpha)^{d_1} = 1 \Rightarrow d_1 = \log_{\alpha} \frac{1}{n} = \frac{-\lg n}{\lg \alpha}$$

最大深度为  $d_2$

$$\text{则 } n \cdot (1-\alpha)^{d_2} = 1 \Rightarrow d_2 = \log_{1-\alpha} \frac{1}{n} = \frac{-\lg n}{\lg(1-\alpha)}$$

7.5a. 共有  $C_n^3$  种取法, 对于  $A[i]$  为主元时共有  $(i-1)(n-i)$  种取法.

$$p_i = \frac{(i-1)(n-i)}{C_n^3}$$

b. 平凡:  $\frac{1}{n}$

$$\lim_{n \rightarrow \infty} \frac{6 \cdot \left(\frac{n+1}{2} - 1\right) \left(n - \frac{n+1}{2}\right)}{n(n-1)(n-2)} = \frac{3}{2} \quad \text{增加到 } \frac{1}{2} \text{ 倍.}$$

c. 平凡:  $\frac{1}{3}$

$$\begin{aligned} \lim_{n \rightarrow \infty} \frac{\int_{\frac{1}{3}}^{\frac{2}{3}} \frac{(x-1)(n-x)}{C_n^3} dx}{\frac{1}{3}} &= \lim_{n \rightarrow \infty} \frac{\int_{\frac{1}{3}}^{\frac{2}{3}} -x^2 + (n+1)x - n dx}{C_n^3} \\ &= \lim_{n \rightarrow \infty} \frac{3}{C_n^3} \left[ \frac{7}{81} n^3 + \frac{(n+1)}{6} n^2 - \frac{n^2}{3} \right] \\ &= \frac{13}{9} \end{aligned}$$

增加到  $\frac{13}{9}$  倍.

d. 根据书中计算 RANDOMIZED-QUICKSORT 期望时间的计算

$$\begin{aligned}
 \text{同理可得 } E(x) &\approx \sum_{i=1}^{n-1} \sum_{j=i+1}^n \frac{c_i + c_j}{\int_i \frac{(x-i)(n-x)}{c_i} dx} \\
 &\approx \sum_{i=1}^{n-1} \sum_{j=i+1}^n \frac{j(n-n-i+i+j(n-n-j^2+j)}{j^3-j^2} \\
 &= \sum_{i=1}^{n-1} \sum_{j=i+1}^n \Omega\left(\frac{1}{j-i+1}\right) \\
 &= \Omega(n \lg n)
 \end{aligned}$$

∴ 只改变期望常数项因子。
